

Amendments to the Claims:

The listing of claims will replace all prior versions, and listings, of claims in the application:

Listing of Claims:

1-40. (Canceled)

41. (Previously Presented) A wallet for use with a personal information device, the wallet comprising:

- a first portion having an input device;

- a second portion coupled to the first portion to receive, detachably retain, and interface with a personal information device that provides organizer features; and

- a power source to provide electricity to the wallet; wherein the wallet conserves the power source by [being turned] turning on in response to a wake signal from the personal information device, and turning off if a stay-awake signal is not received from the personal information device for more than a threshold period of time.

42. (Previously Presented) The wallet of claim 41, wherein the personal information device comprises a PCMCIA card.

43. (Previously Presented) The wallet of claim 41, wherein the personal information device comprises a personal digital assistant.

44. (Currently Amended) The wallet of claim 41, wherein the second portion includes an induction coil adapted to interface without electrical contact with said personal information device when retained by said wallet, the wake signal being communicated to the wallet using the induction coil.

45. (Canceled)

46. (Previously Presented) The wallet of claim 41, wherein the power source comprises a battery.

47. (Currently Amended) A method performed by a wallet having a power source and detachably retaining a personal information device, the method comprising:
receiving a wake signal from the personal information device providing organizer features; and
turning the wallet on in response to the wake signal by providing electricity to wallet components from the power source; and
turning the wallet off in response to not receiving a stay awake signal from the personal information device for a predetermined period of time by powering down the wallet components.

48. (Canceled)

49. (Previously Presented) The method of claim 47, wherein the wake signal is received by the wallet using an induction coil interface.

50. (Previously Presented) The method of claim 47, wherein the wallet comprises a PCMCIA card.

51. (Previously Presented) The method of claim 47, wherein the power source comprises a battery.

52. (Currently Amended) A machine-readable medium containing data representing instructions that, when performed by processor of a wallet having a power source and detachably retaining a personal information device, cause the processor to perform operations comprising:

receiving a wake signal from the personal information device providing
organizer features; and

turning the wallet on in response to the wake signal by providing electricity to
wallet components from the power source; and

turning the wallet off in response to not receiving a stay awake signal from the
personal information device for a predetermined period of time by
powering down the wallet components.

53. (Cancelled)

54. (Previously Presented) The machine-readable medium of claim 52, wherein the wake signal is received by the wallet using an induction coil interface.

55. (Previously Presented) The machine-readable medium of claim 52, wherein the wallet comprises a PCMCIA card.

56. (Previously Presented) The machine-readable medium of claim 52, wherein the power source comprises a battery.
